

# Shopping Cart Mini Project

You need to create a small application with following functionalities. Sample of a page is given at the end of the document.

1. Create a page as you see in a given image.
  2. For product items you need to store in a localStorage/array of objects.
  3. Display all product items as given in a sample image using foreach loop. (for images you may take images from source.unsplash)
  4. Add plus+ and minus- button to add a particular product into a cart.
  5. When you press on plus/minus button it should work accordingly as you can see in a given image.
  6. When user click on a plus button of any product, one row should be added to a shopping cart list/table. (if product isn't already in a shopping cart otherwise increase quantity number) and vice versa.
  7. If user click on plus/minus button in a shopping cart list, it should increment/decrement quantity of that product.
  8. Delete button of row should delete particular row from a list.
  9. If user click on an empty cart link it should empty the cart.
- Note:** You are encouraged to use all concepts we have learned in a class. localStorage, spread operator, modules, object & DOM etc.
